

# A Responsive Audio and Tactile Method for the Vision Impaired

Michael Broderick

in collaboration with

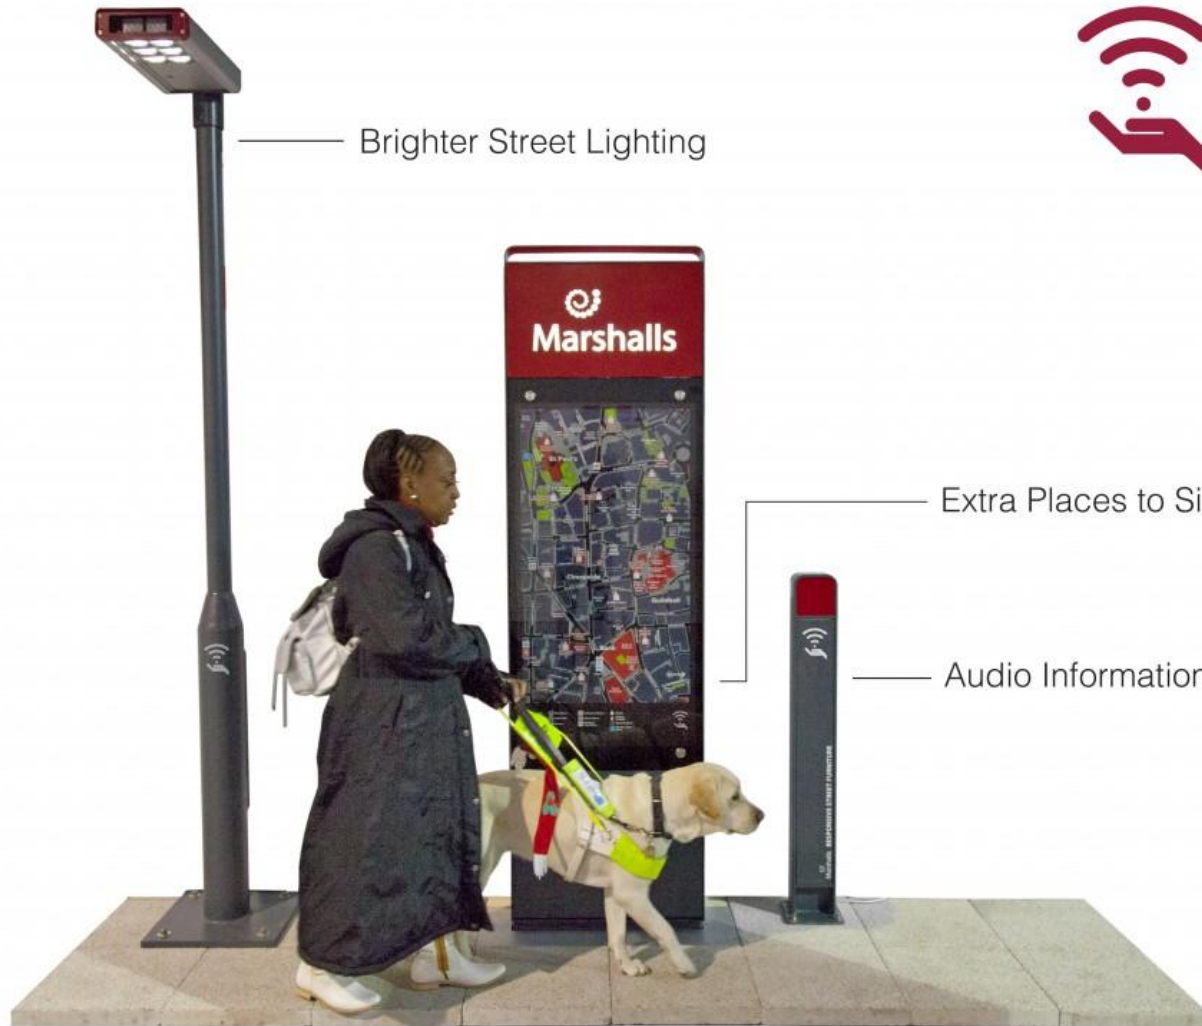

# Aims

- Wayfinding for people who are blind
- Floorplan model placed in entry of public building
- User interacts with model via touch
- Audio and vibration feedback

— Brighter Street Lighting

— Extra Places to Sit

— Audio Information

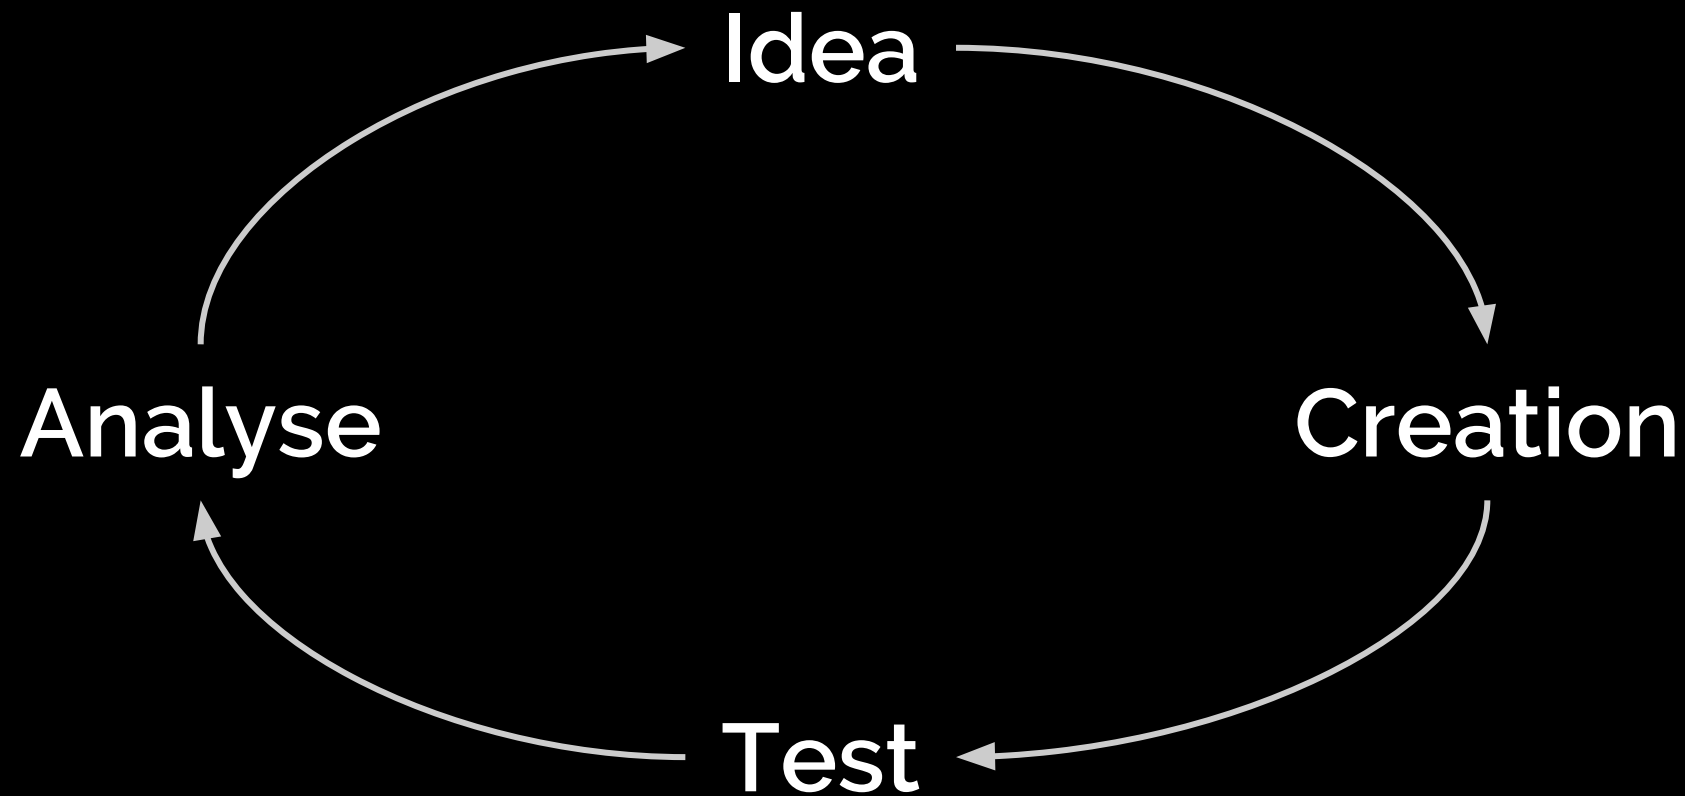

# *Wayfindr*

— *WILLIAM S. BAKER* —

“Processes of action, perception and cognition turn out to occur in a haptic exploration of a design proposal similar to sighted practice”

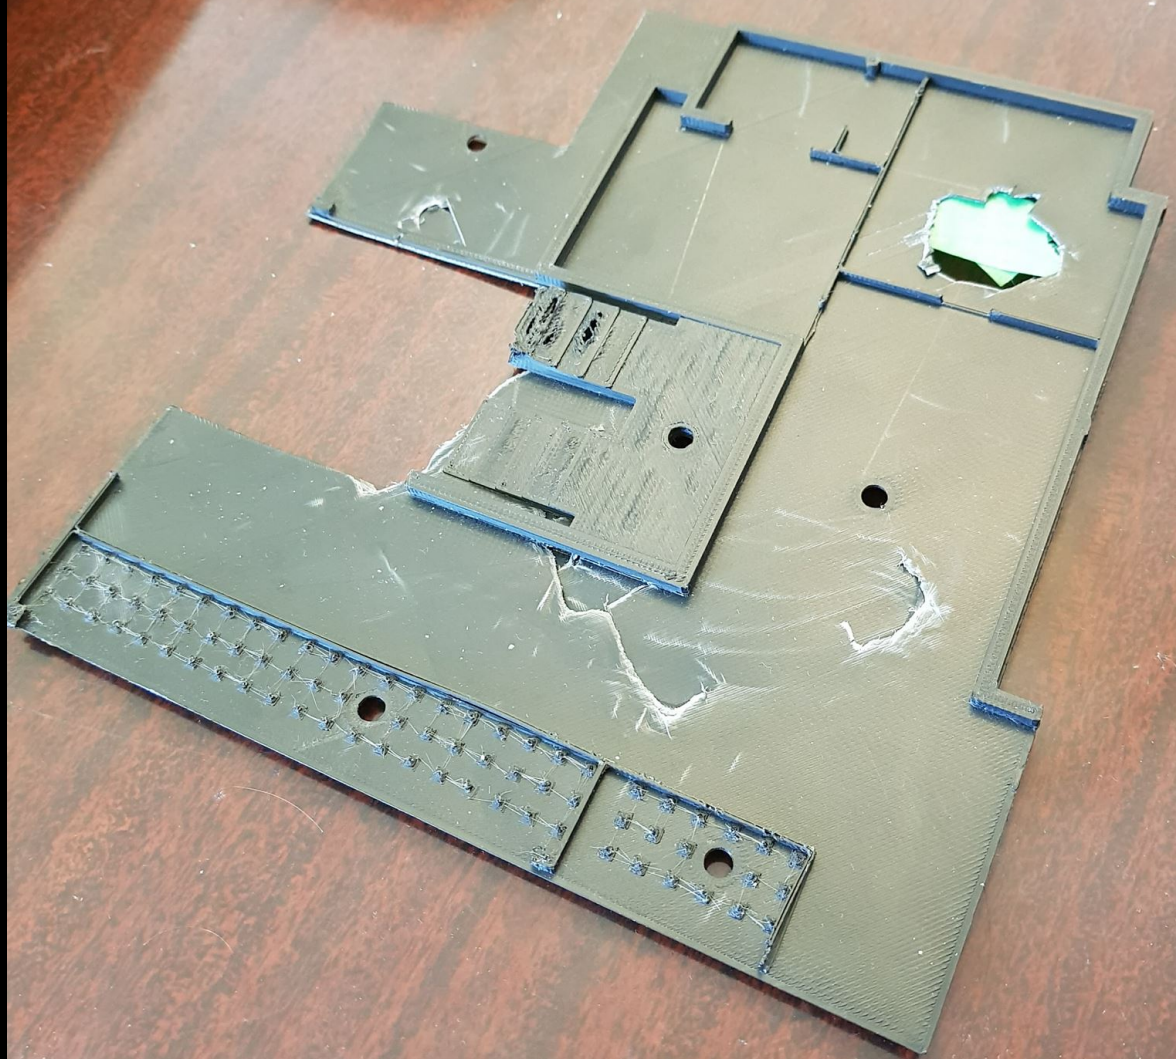

– Vermeersch et al. 2011

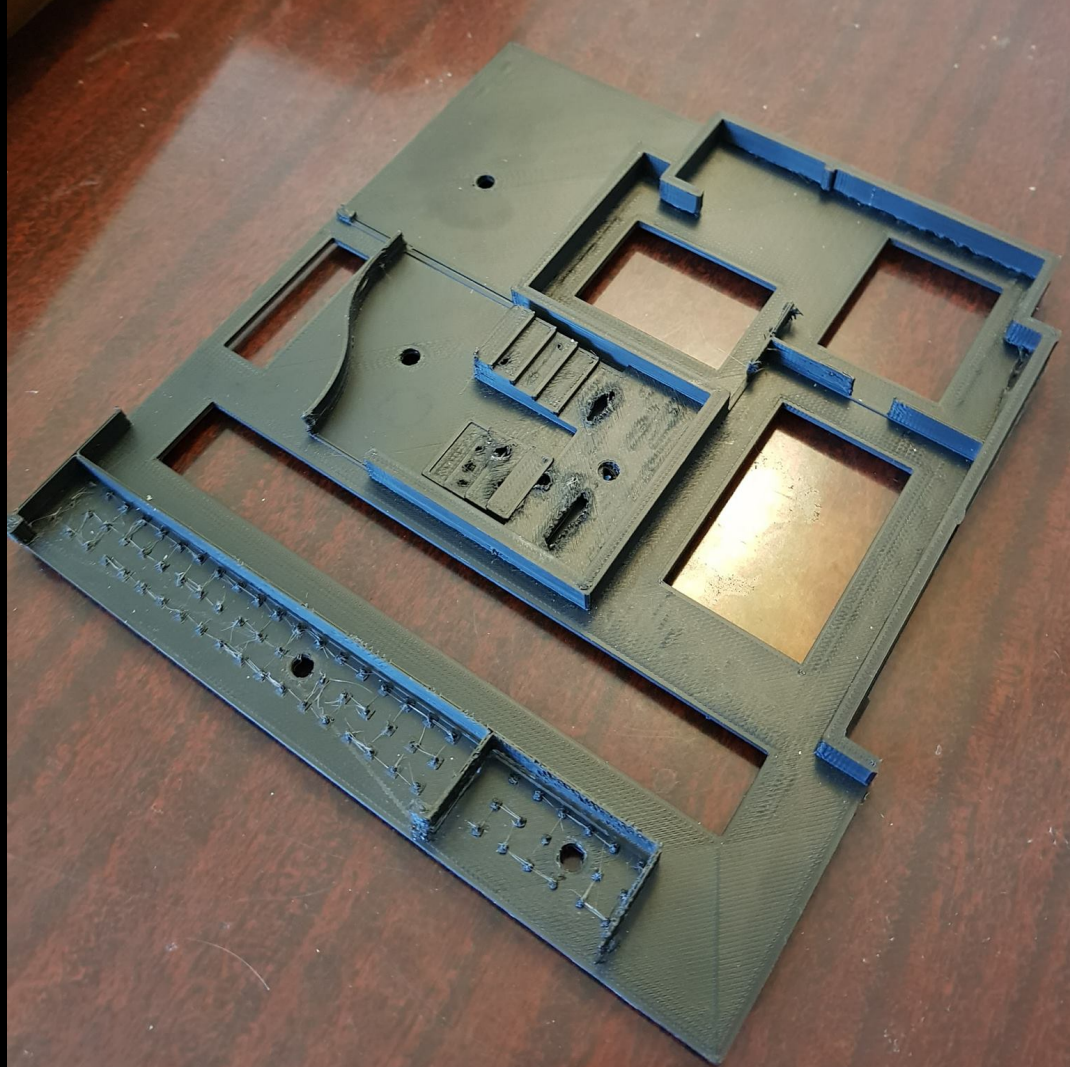

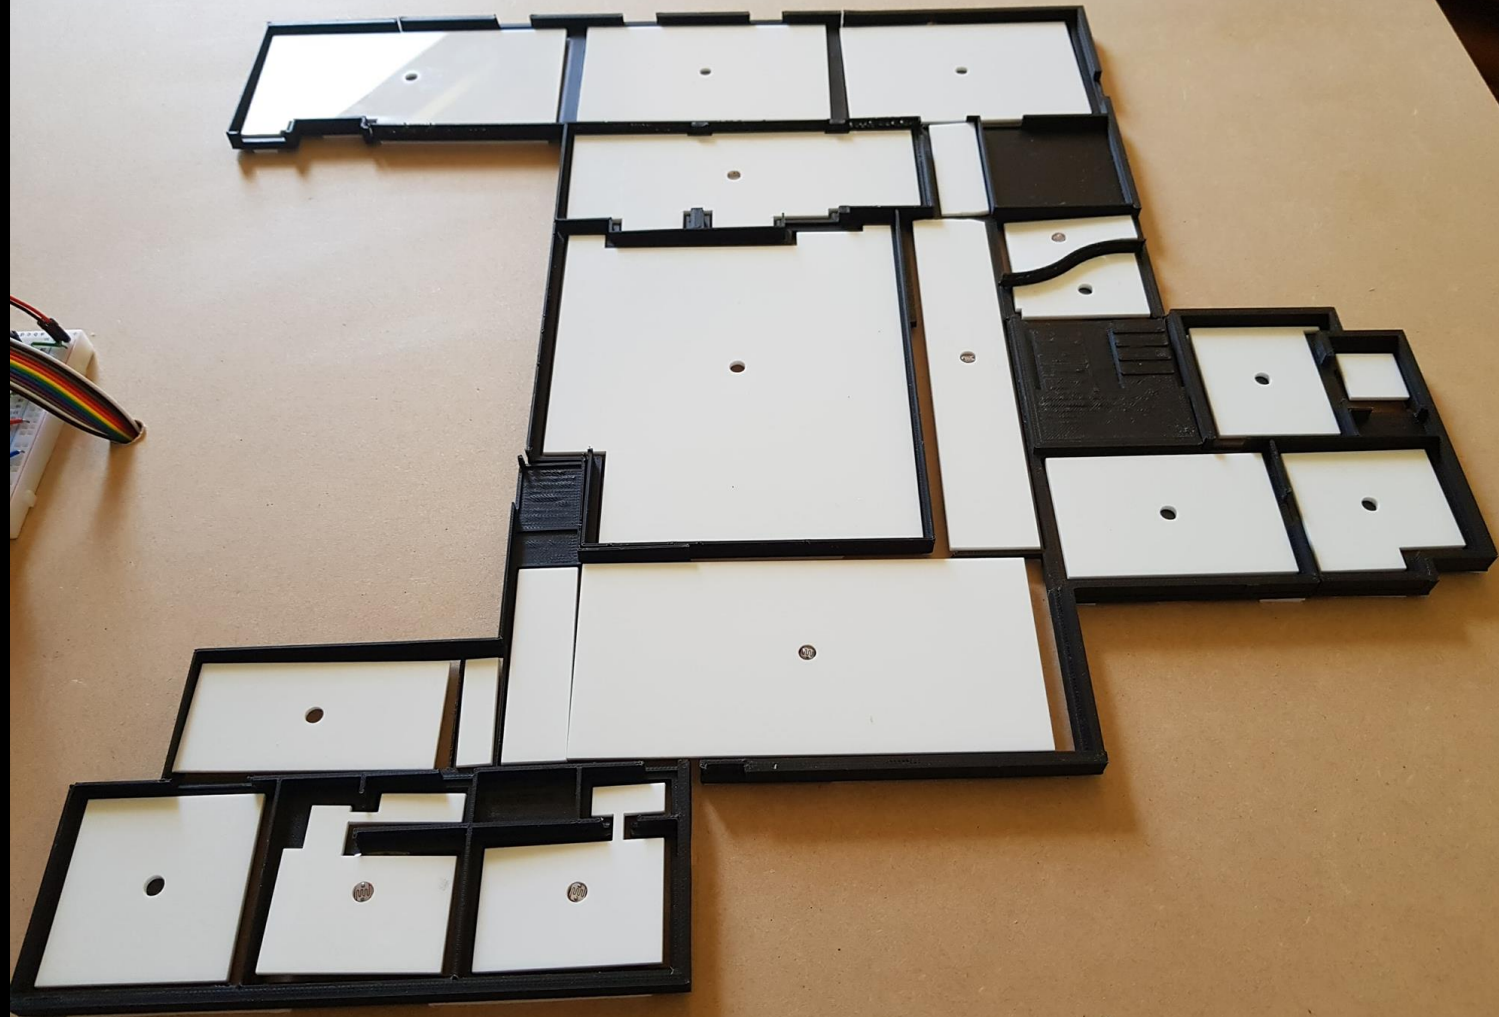

**3D Model**

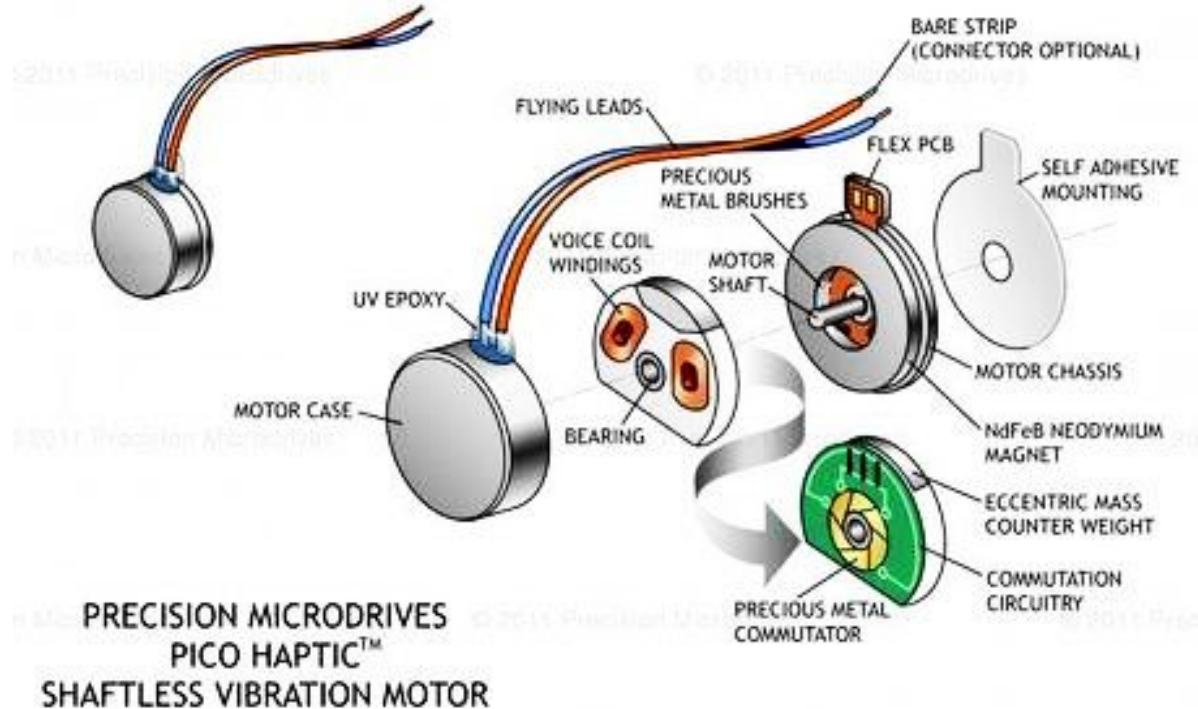

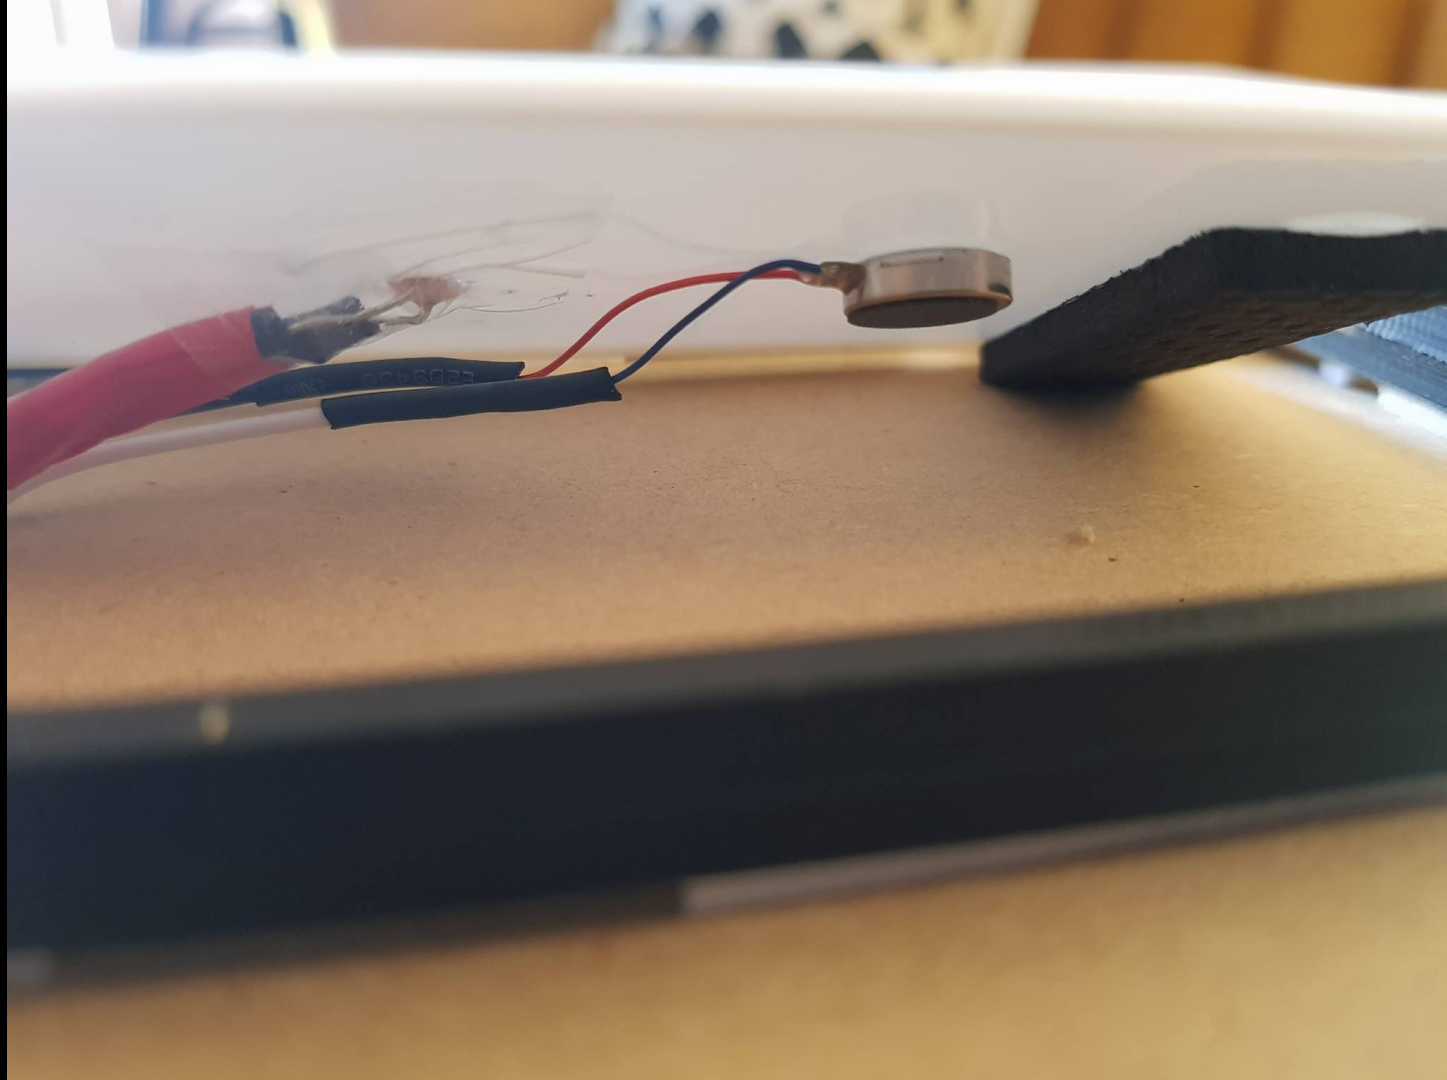

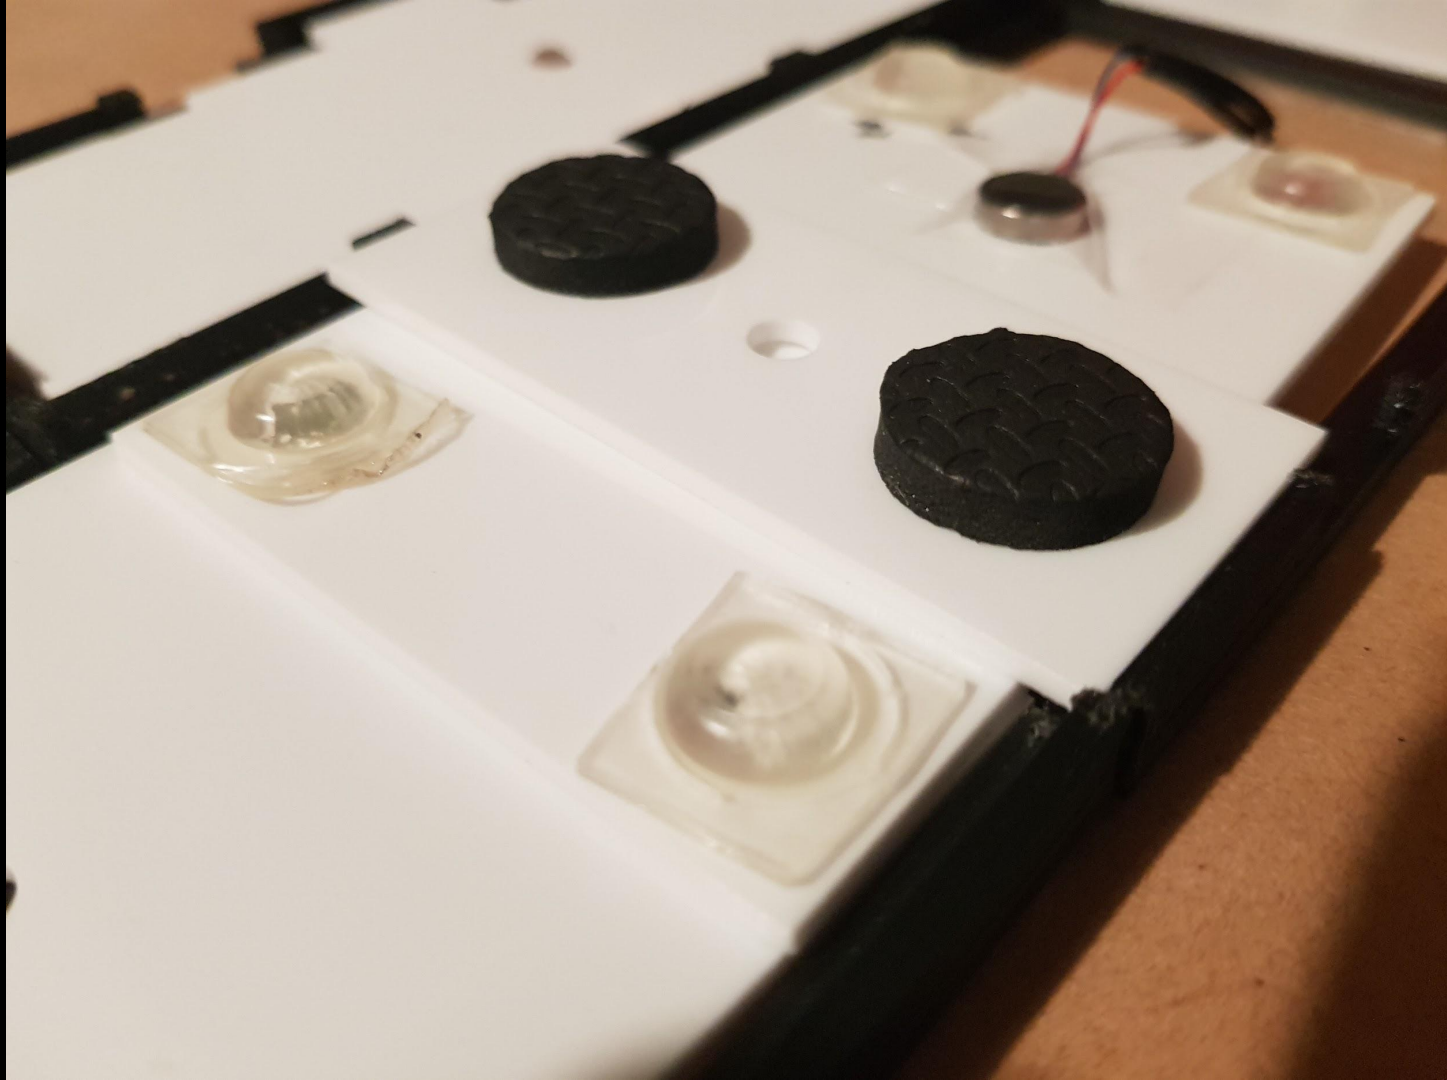

# Electronics

# Path Discovery

- Vibration
- Hot wire
- Air jets

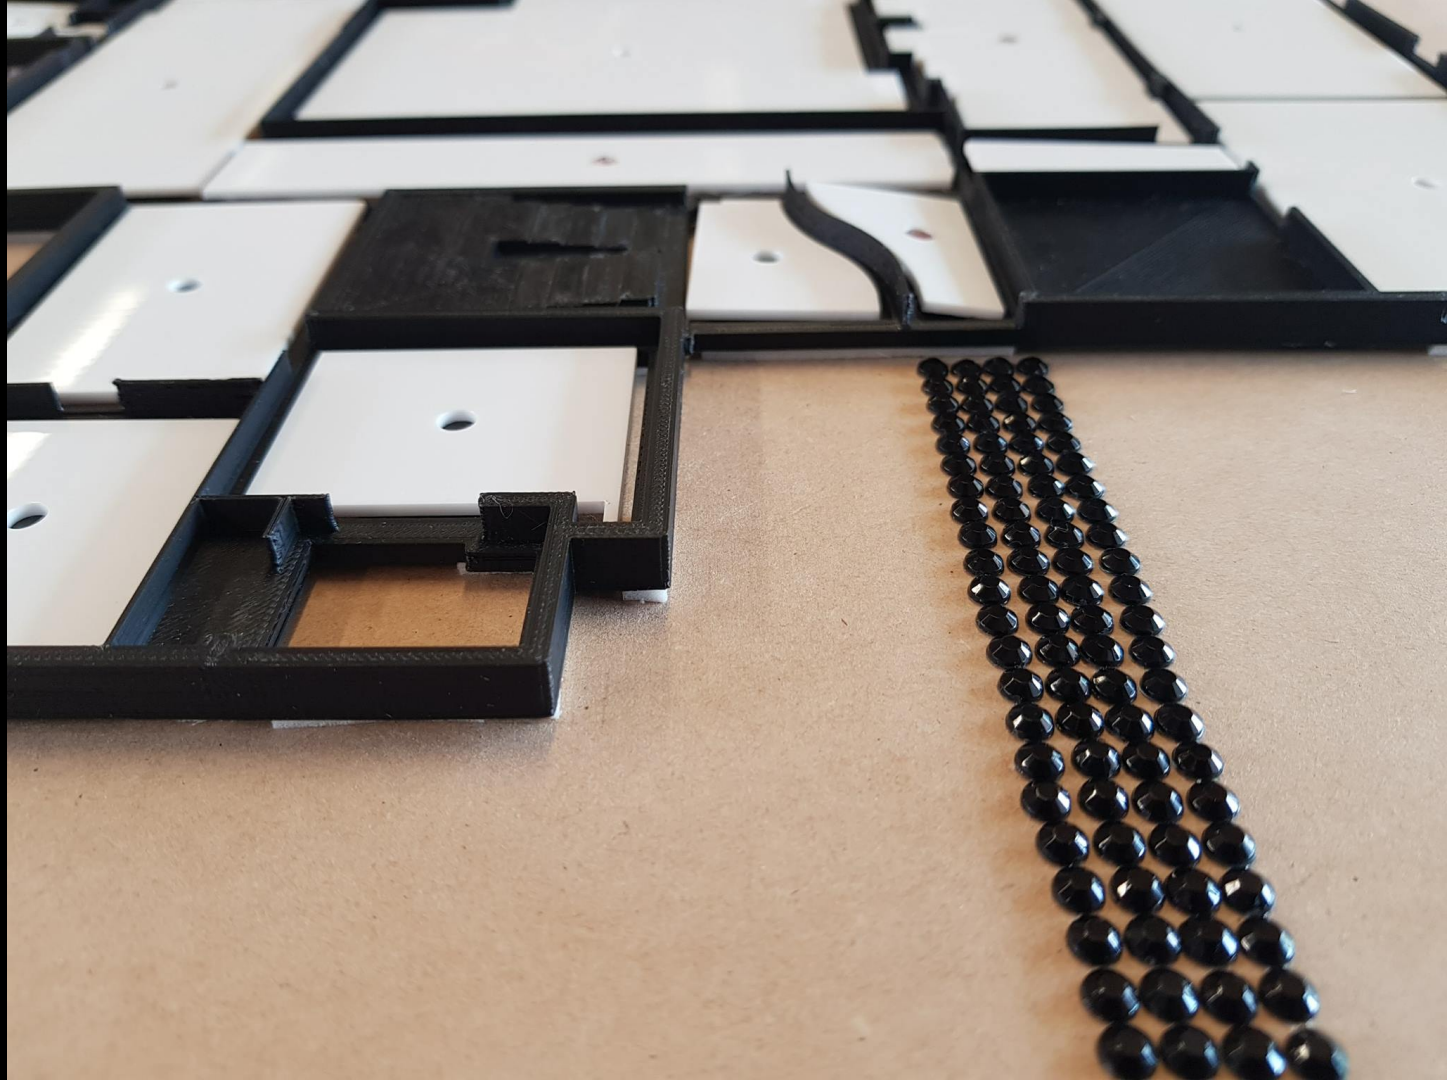

# Vibration Input

1. Physical Button
2. Virtual Button (App)

# Audio - Input

- Photoresistors
- Capacitive touch
- Proximity  
Sensors

# Audio - Output

- Buzzer
- Audio shield
