Evaluation

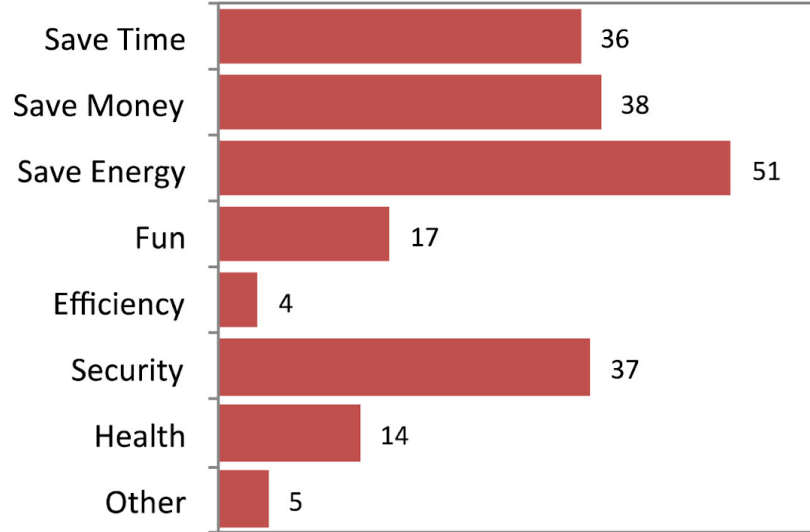

What is smart system?

WHY?

N=62

(a) Benefits to user

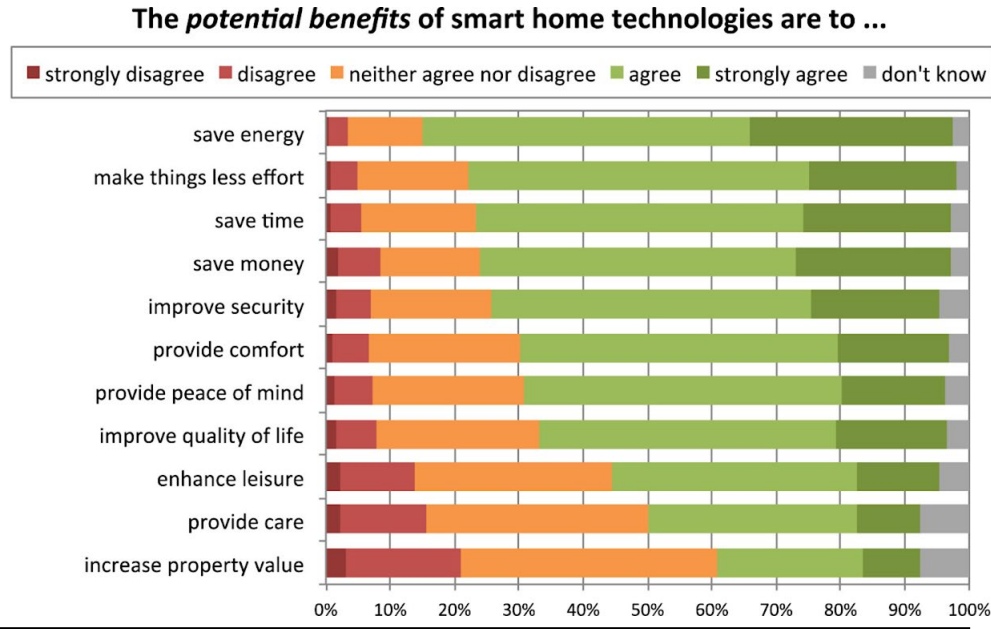

Content of smart home marketing material.

Wilson, C., Hargreaves, T. and Hauxwell, R. (2017). Benefits and Risks of Smart Home Technologies *Energy Policy* 103, pp.72–83.

WHY?

N = 1025

Prospective users' perceptions of the benefits of smart home technologies. "The purpose of the smart home is making life at home more convenient (83% agree or strongly agree)"

Wilson, C., Hargreaves, T. and Hauxwell-Baldwin, R. (2017). Benefits and Risks of Smart Home Technologies *Energy Policy* 103, pp.72–83.

WHY?

City workers lived in mainland state capitals spent more than an hour travelling to and from work each day. The average was about 66 minutes.

Household, Income and Labour Dynamics in Australia (2019)

Ready to go home?

Can you prepare the bath water for me in advance?

Can you heat my food in microwave in advance?

Can you turn on the airconditioner in advance ?

wELCOME HOME!

OK!

How does it work?

Distance

Comparison loop

Video

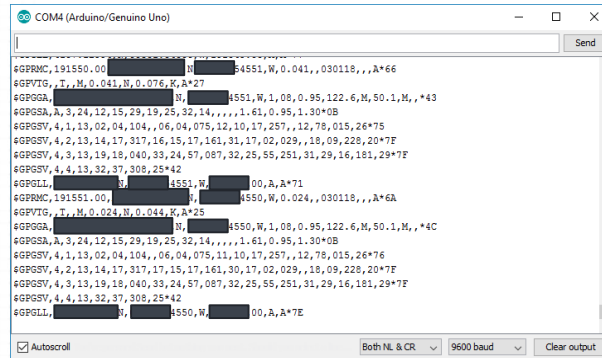

Results

Iteration 1

```
while (ss.available() > 0){  
  // get the byte data from the GPS  
  byte gpsData = ss.read();  
  Serial.write(gpsData);  
}
```

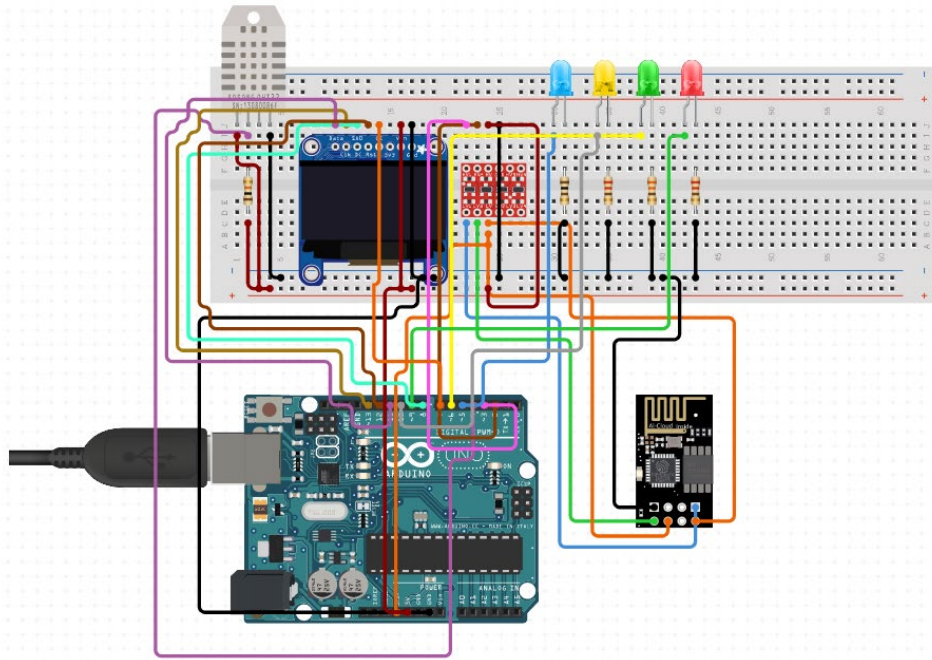

1. Aruino Uno
2. Neo-6M GPS Module
3. OLED

Output:

National Marine Electronic Association format
Code GPGLL : Latitude and longitude of current location

Iteration 2

1. Arduino Uno
2. ESP8266 WiFi Module
3. OLED
4. DHT 11
5. LED*4

Output:

Code EXPLAIN

```
void loop()
{
  MS2000_Con=millis();
  MS1000_Con=millis();
  if(MS1000_Con%100==0)
  {
    if(Count_EN)
    {
      if(Dis_Data>0)
        Dis_Data=Dis_Data-1;
      if(Dis_Data<0)
        Dis_Data=0;
    }
  }
}
```

ASSUMED DISTANCE

Assume the default distance is 2.6 km,
and the distance will decrease 1 m per
second

Compare the distance data with the set point
If the distance < set point
Start the house appliance

COMPARISON LOOP

```
if(Dis_Data<1000)
{
  digitalWrite(LED_A, HIGH);

  if(Hum_Data_View>65)
  {
    digitalWrite(Fan_A, LOW);
    digitalWrite(Fan_B, HIGH);
  }
  else
  {
    digitalWrite(Fan_A, HIGH);
    digitalWrite(Fan_B, HIGH);
  }
}
```

Conclusion

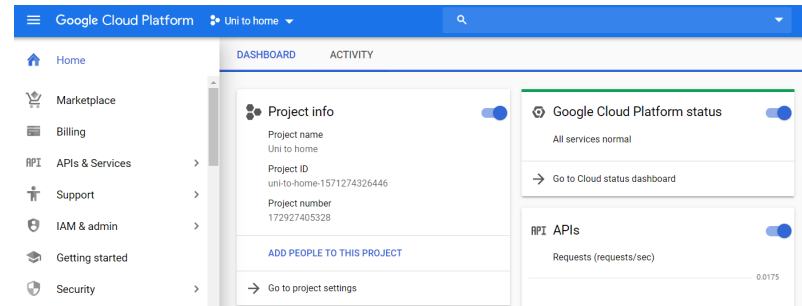

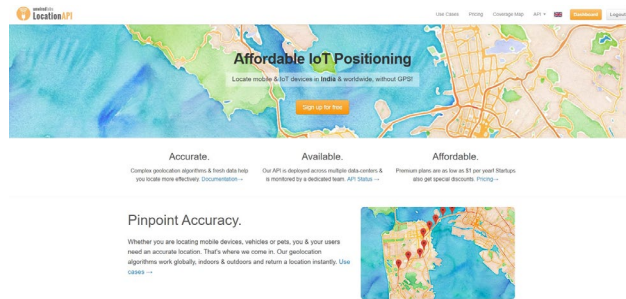

further
direction

Testing NodeMCU with Neo-6M GPS Module

further
direction

Develop mobile server& Connect and control system- IoT

Thank you
